

AVF FilmGrade V1 Demo • DaVinci Resolve Studio • macOS + Windows

Demo Installation Guide

Try the AVF FilmGrade V1 workflow before purchasing the full version. The demo uses the same installation steps and includes a visible watermark.

01 Unzip the demo download

Download the free demo from Payhip. If it arrives as a ZIP, unzip it and keep the included demo **.dctl** file unchanged.

02 Open Resolve's LUT folder

In DaVinci Resolve Studio, click the **Project Settings** gear → **Color Management** → **Lookup Tables** → **Open LUT Folder**.

03 Copy the demo DCTL

Copy the included demo **.dctl** file into the folder Resolve opened. You can create an "AVF FilmGrade" subfolder to keep your tools organized.

04 Restart Resolve Studio

Fully quit and reopen DaVinci Resolve Studio so it indexes the demo DCTL.

05 Apply it to a creative node

On the **Color** page, add a serial node. Go to **Effects Library** → **OpenFX** → **DCTL**, drag it onto the node, then select the AVF FilmGrade demo in the Inspector.

About the watermark: the demo intentionally places a visible watermark over the image. Use it to test the workflow and controls; install the full version after purchase for clean, watermark-free output.

Important: the demo requires **DaVinci Resolve Studio**; it does not run in the free Resolve edition. For help, email anurag211020022002@gmail.com with your OS, Resolve Studio version, and a screenshot of the LUT folder.
